

Company Strategy Brief

FY2026 | Data-linked commercial priorities

Recommendations are grounded in the transaction dataset and should be validated with supporting evidence.

FY2026 commercial strategy

1. Protect major revenue drivers

Prioritize availability and sales coverage for Product F and Product B, which together generate \$8,115,219.

2. Review the weakest product

Investigate positioning, pricing and customer feedback for Product D.

3. Replicate high-performing sales practices

Top three salespeople by revenue: Fatima, Hamza, Zara. Compare their product and regional mix for repeatable practices.

4. Cross-source validation

When revenue falls in a month or region, compare transaction patterns with customer feedback and product-performance findings before concluding that demand alone caused the decline.
